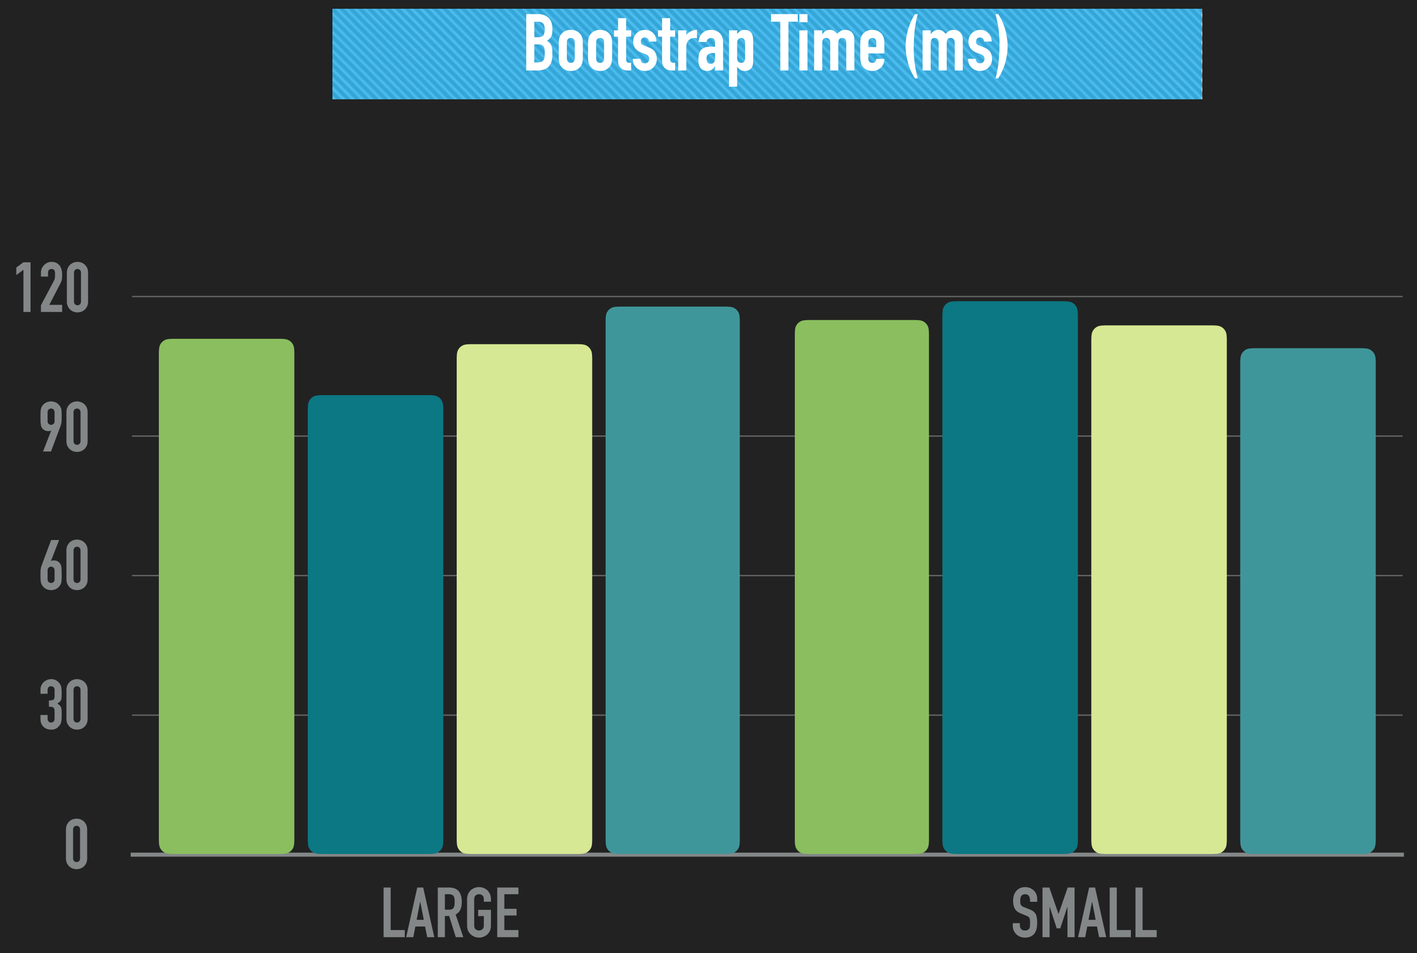
```yaml
service: pycon-very-large

provider:
 name: aws
 region: ap-southeast-1
 runtime: python3.7

package:
 individually: true

functions:
 small:
  handler: main.hello
  description: Lambda Function without the 49MB file
  memorySize: 128
  timeout: 30
  package:
   exclude:
    - 49MBFile  # a 49MB file in this folder

 large:
  handler: main.hello
  description: Lambda Function without the 49MB zip file
  memorySize: 128
  timeout: 30
  package:
   include:
    - 49MBFile
```



Yes, unexplainably the large file was faster?!!
